TO CORRESPONDENTS

I take pleasure in presenting herewith my twenty-eighth annual catalogue and price list.

It has been my endeavor to list, as much as possible, only the very best and most satisfactory of both Fruit and Ornamental Trees and Plants. Whatever I am not able to grow on my own grounds I procure from the most reliable Nurseries. My Nursery is located between Fifth Avenue and Center Street, one block north and two blocks west from the Telephone Building, corner Fourth and H Streets, San Rafael.

I do not give lengthy descriptions of plants, as it is far more satisfactory to see the plants actually growing in the nursery. I have specimen plants of a number of varieties of trees and shrubs; therefore invite my customers and friends to visit the nursery whenever convenient.

Business hours from 8 a.m. to 5 p.m., except Sundays.

I warrant all trees and plants to be healthy, and true to label, but having no control over them after delivery, I do not GUARANTEE them to live and thrive, nor will I replace them, except any tree or plant should prove untrue to name; but in no case will I be liable for any sum greater than the original purchase price.

My customers are requested to notify me immediately of any error that may have occurred in filling their order, so that the same may be rectified, as I desire to give satisfaction to all who favor me with their order.

All orders delivered free in San Rafael and surrounding towns; a small charge for packing, to cover cost of material, will be made for all orders shipped by express or freight. All articles are at the risk of the purchaser, after being shipped.

Orders from unknown correspondents must be accompanied by cash or satisfactory reference. All bills payable first of the month.

STATE SALES TAX:

When ordering, please add to the amount of your order the California State Sales Tax, **3 cents for each dollar.**

NOMENCLATURE

All plant names, both botanical and common, have been revised to conform with 1928 edition of "Standardized Plant Names" if listed in that book. The only exceptions are a few uncommon items and novelties which that book does not include. This standardized nomenclature should unquestionably be followed by everyone from now on.

ESPALIER FRUIT TREES.

Trained Wall Fruit or Espalier Trees have been grown in European gardens for at least a century, mostly because of climatic conditions, and for lack of space for orchard trees. They can be grown successfully on a very narrow strip of ground, against a wall, in a patio, or as a border. They are easily protected during their flowering season against frost and rain, and against insects and birds at the time of ripening of the fruit which is, under proper care, more delicious and highly colored than orchard-grown fruit. We have a limited number of young trees two and three years old, available this season:

APPLES: Bellfleur, Delicious, Newton Pippin and Winesap. PEARS: Beurre Hardy, Clapps Favorite. PLUMS: Jefferson, Reine Claude. Peaches: Alexander, Crawford, Mayflower, Elberta, CHERRIES: May Duke, Montmorency.

PRICES according to number of branches—$4.00, $6.00, $8.00. Packing charges, $1.00, $1.50, per tree extra.

Conifers

Coniferous Trees are the grandest trees in existence. A good many of them are natives of the Pacific Coast, and therefore at home in our climate. Though the more expensive varieties are of rather slow growth, until well established in the ground, they will grow into the finest specimen trees for the lawn in a few years. Prices are for small and medium-sized plants. Quotations for larger plants on application.

Planting Season:

Field-grown plants from October to March. Pot-grown and boxed plants from September to June.

Evergreen Trees and Shrubs

Broad-leaved Evergreens vary in size from the largest trees to the smallest shrubs; unlike the coniferous Evergreens, whose flowers are insignificant, most of these excel in brilliancy and floriferousness, others through their shining berries and foliage. These plants give our California garden and parks their distinctive feature.

Planting Season:

October to April; pot-grown plants of this class can be planted any time during the year.

Deciduous Tress and Shrubs

The best street and avenue trees are decidedly deciduous trees; they will give the necessary shade in summer and admit sunshine in winter. In this class are also the most gorgeous spring and summer blooming shrubs. Deciduous weeping trees are beautiful specimen trees for the lawn.

Prices are for field-grown plants, except where noted.

Planting Season:

November to March, after leaves commence to fall and before they commence to bud in spring.

Flowering Fruit Trees

Among the flowering trees the flowering types of our fruit trees are undoubtedly the most popular. Beginning with the flowering Almonds, Apricots and Plums in February and March, followed by the gorgeous double flowers of the Peaches and numerous types of Crabapples in April, and finishing up in May and early June with a splendid display of the Japanese Cherries, will mean a continuous blossom time at home in your garden.

Planting Season:

January to March, or earlier, if stock is available, and the weather permits.

Roses

The "Queen of Flowers" gives best results when planted in a sunny location and in a fairly heavy sediment soil. Be sure that the plants are set deep enough, atleast one or two inches deeper, than where the bud has been inserted. Prune rather severe during the winter months, December to February, except the spring blooming climbing Roses like Banksias, Cherokees and Ramblers. Prune these roses right after the blooming season is over, never in the fall.

Budded Roses are more vigorous and give better results than stock grown on its own roots, with the exception of a few climbing and strong growing varieties.

Planting Season:

January to March, also in the late fall, if stock is available.

Water Lilies

The culture of Water Lilies is so simple that it might almost be said that "they just grow themselves." Their modest requirements are sun, water and rich soil. In deciding on a place for a natural water-garden one is naturally led to select a low spot.

It is not very difficult to construct an artificial pool. Any location that is available would be satisfactory, provided it is exposed to the full sun.

An artificial pool should be made as large as possible, and 2 feet deep. In California it is advisable to build the bottom and side walls of 6-inch water tight concrete. Make an artificial pool as natural as possible and avoid stern lines and too apparent masonry. A generous planting of moisture-loving plants around the edge of the pool or pond will furnish an added charm to the plants in the pool itself.

One foot of water over the soil is the most desirable depth in artificial pools. Some will thrive in shallower water, but few will stand a depth exceeding 2 or 3 feet. A continuous flow of water tends to keep the temperature in the pool low and must be avoided. After the pool is once filled it is only ncessary to replenish that which evaporates.

A few Goldfish will serve to destroy the wrigglers that hatch into mosquitos and larvae of other insects.

TROPICAL WATER LILIES

Sooner or later every owner of a pool wants to grow a few tropical water lilies. Considering their intensive blooming season, the quality of their flowers, on strong stems above the water, they are really the aristocrats of the lily pool. Young plants have to be started in the greenhouse, and should not be planted until the middle of May. It is best toset out new plants every year. Order early. Prices, according to variety, from $1.50 up.

NELUMBIUM NUCIFERA

The most strikingly beautiful plant in the aquatic field is the Lotus or Nelumbium. The large concave leaves, resembling green shields, are borne on stout stems high above the water. The flowers are of exquisite rose pink, like giant Tulips, changing to creamy tints when fully open.

The brown seed-pods, which remain long after the flower is gone, are very artistic.

The Nelumbiums are rampant growers and heavy feeders and must be supplied with a very rich soil.

Tubers ready in May, each $1.75

Hardy Perennials

Herbaceous plants are indispensable for filling in and planting amongst shrubbery, in the rock gardens, for the old-fashioned perennial border, etc. Most varieties, after once planted, will live and bloom without much attention, for many years. Prices are for field-grown, potted or transplanted seedling plants.

Planting Season:

October to March, as early as possible, whenever the soil is in good condition.

Summer Flowering Bedding Plants

The plants are mostly Annuals, raised every year from seed or cutting; several are of a hardier nature, and under favorable conditions will stand our California winters. Prices are for plants grown in boxes or 2½ and 3-inch pots.

PLANTING SEASON:

April, May and June, except for the winter and early spring bloomers, like Pansies, Winter Stocks, Wallflowers, etc.; plant those in October and November.

Lawn Grasses

TO MAKE A LAWN:—

The ground should first be deeply spaded, adding commercial fertilizer or manure, and should then be leveled to the proper grade. A good plan is to let it lay for several weeks and water thoroughly. This will give a chance for many of the weeds to sprout and they can be hoed off as they come up. After the weeds have been removed, rake the surface smoothly and sow the seed broadcast at the rate of one pound to 150 square feet, except where noted.

After the seed has been sown, it should be covered with about one-quarter inch of good mulch, such as Imported Peat. This is very essential as it is necessary that the surface be kept continually moist, giving the seed an opportunity to germinate. After the first cutting it should be fertilized and in order to maintain a deep velvety green turf a dressing should be applied at least three times a year.
